

Return Process Guide

Step-by-step process for customers and support agents to initiate and track a return.

Document ID	KB-RET-002	Version	v2.5
Owner	Customer Experience Team	Last Updated	03 Aug 2026

1. How a Customer Initiates a Return

- Go to “My Orders” and select the relevant order.
- Tap “Return / Refund” next to the item.
- Select a return reason from the dropdown (wrong item, defective, changed mind, size issue, etc.).
- Upload photos if the reason relates to damage, defect, or an incorrect item.
- Choose a resolution: replacement, refund to original payment method, or Daraz Wallet credit.
- Confirm the pickup address and preferred pickup time slot.

2. Pickup & Drop-off Options

Method	Location	Timeframe
Counter Pickup	Business hours only	Request within 3 business days
Drop-off at designated point	Self-collection	Within 5 days
Self-ship (via courier)	Defective cases only	Request within 3 business days

3. Quality Check (QC) Process

Once the item is collected, it is routed to the nearest fulfilment or seller warehouse for a quality check. A QC agent verifies the product against the return reason, confirms the condition matches eligibility rules, and updates the return status accordingly.

- QC Passed — refund or replacement is triggered automatically.
- QC Failed — item is shipped back to the customer with a rejection reason, and the customer is notified.
- QC Disputed — escalated to a senior agent for manual review within 2 business days.

4. Tracking a Return

Customers can track return status in real time under “My Orders → Returns”, which shows each stage: Requested, Pickup Scheduled, Picked Up, In QC, QC Passed/Failed, and Refund/Replacement Issued.

5. Support Agent Checklist

- Verify the order falls within the applicable return window before approving.
- Confirm evidence (photos/video) is attached for defect or wrong-item claims.
- Check for prior abuse flags on the customer account before approving high-value returns.
- Escalate ambiguous cases to the Trust & Safety queue rather than approving manually.

Escalation SLA: Any return stuck in “In QC” for more than 5 business days should be escalated to the Warehouse Operations team via the internal ticketing system.
